Expanded Metal Floors have advantages for hay trailers:

- Eliminates mold forming between the floor and hay
- Enhances drying high moisture hay
- Reduces load shifting and chaff buildup

Stake Pockets and Rub Tie Rails are standard design across the front and rear of the trailer. This allows for easy placement of chains and straps when you need to secure a load front to rear.

Hauling round bales is safe, secure and easy with our **Round Bale Stops**. They slide into the front and rear stake pockets. They allow you to place horizontal straps along each side of the trailer.

30+ YEARS INDUSTRY STANDARD COATING. YOU WON'T REPAINT A NAUSE TRAILER!

Quality "Built to Use, Built to Last"
Buy 'em Once, Buy 'em For Life!

Safely hauling small squares on flat bed trailers has never been easier. Haul small squares tight, safe, secured front to back and side to side! Our **Pin On Mounted, Removable, Squeeze Racks with 4 Pre-positioned 2" Nylon Straps** allow one person to secure small squares tight and safe in about five minutes, without your feet ever leaving the ground. Positioning of the folding racks can easily be controlled with the ratcheting turn buckle!
